Elba Liquefaction Project NEWSLETTER

Students Participate in Viva Technology Program

Project Highlights

**Project Overview:**
Kinder Morgan and Shell affiliates have formed a limited liability company to develop a natural gas liquefaction plant at the Elba Island Terminal near Savannah, Ga.

Subject to regulatory approvals, Shell and Kinder Morgan affiliates will modify the Elba Island Terminal so that liquefied natural gas (LNG) can be loaded onto ships for export.

The project will facilitate development of abundant natural gas reserves in the United States.

**Capacity:**
The total project is projected to have liquefaction capacity of approximately 2.5 million tonnes per year of LNG.

**Estimated Schedule:**
- Begin construction: Early 2015
- Phase I in-service: 2016/2017
- Phase II in-service: Late 2017

**Estimated Total Project Cost:**
$1-$1.5 billion

**Job Creation:**
The project will generate several hundred temporary jobs during the construction period.

**Local Commerce:**
The project will increase revenue to local restaurants, hotels and motels, and retailers from patronage by project personnel and construction crews.
